
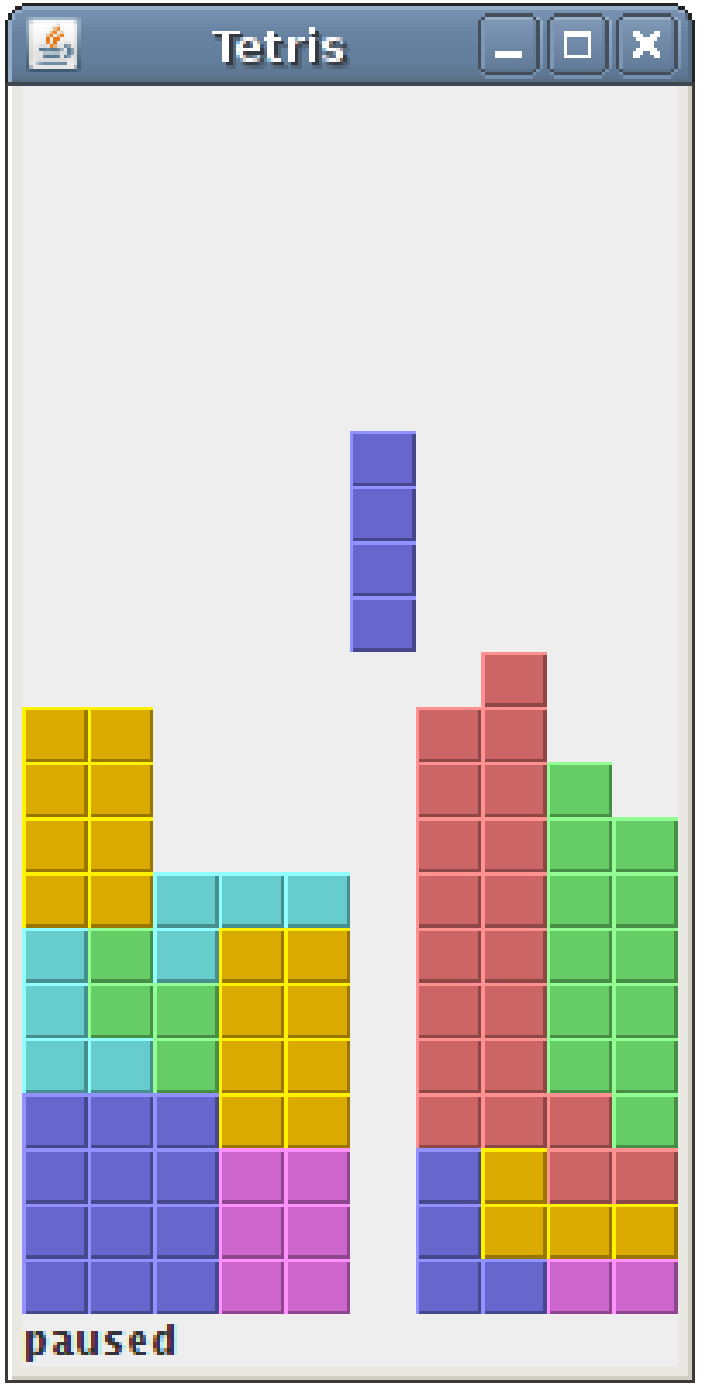
OOP Homework 3 - Tetris

Kuan-Ting Lai

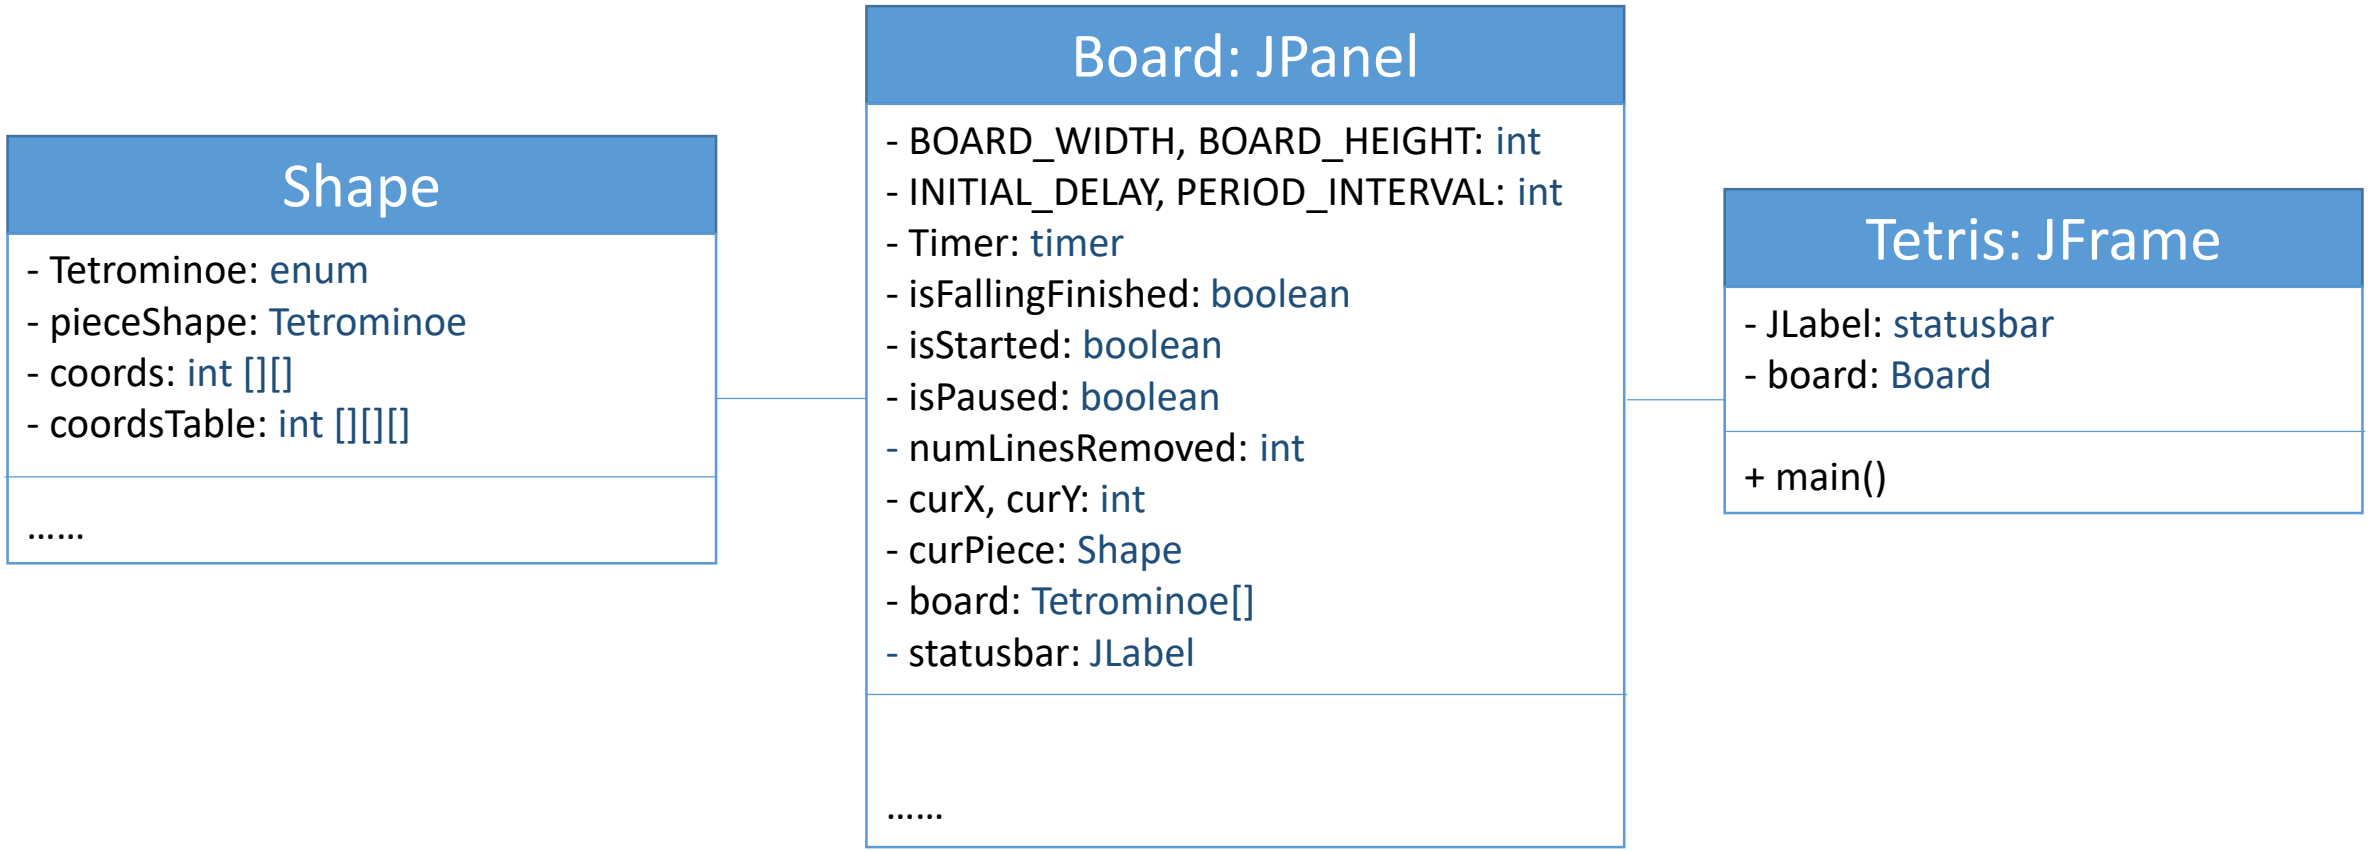
2019/5/2

Developing a Tetris Game

- http://zetcode.com/tutorials/javagamestutorial/tetris/
- Using Java Swing
- ↑ ↓: Rotate
- ← →: Move left/right
- Space: drop immediately
- d: drop faster

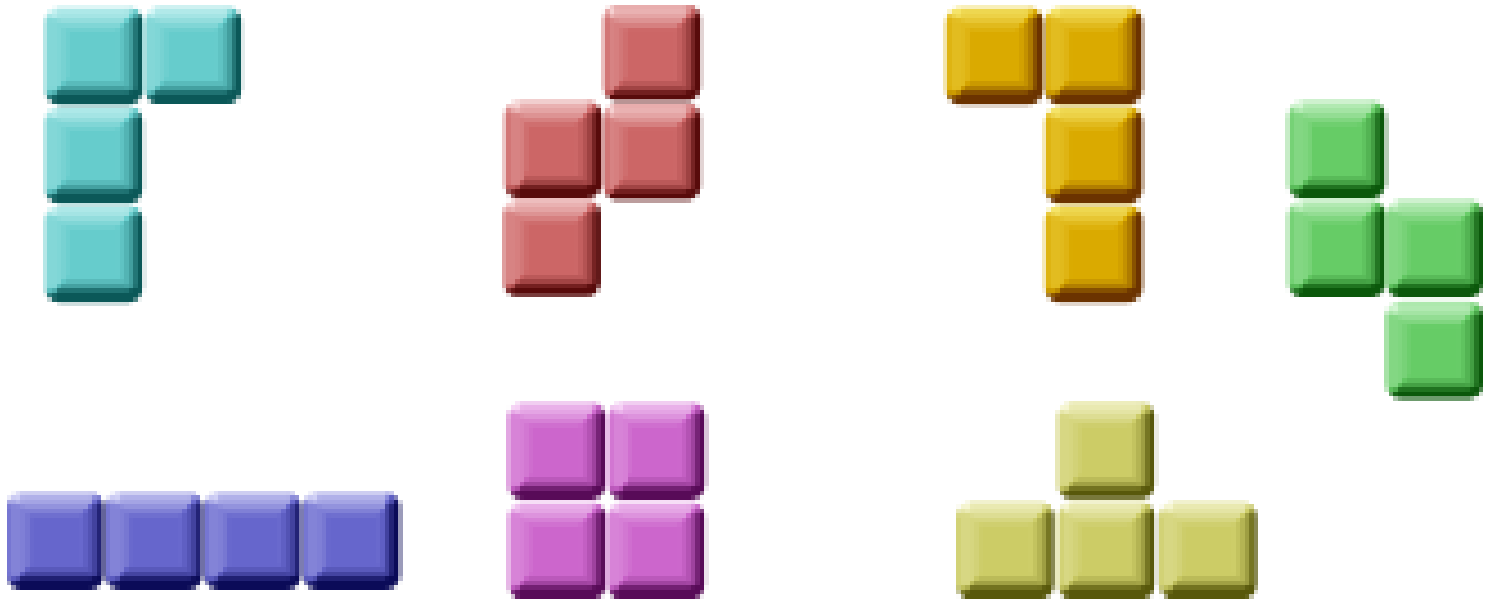


Class Diagram

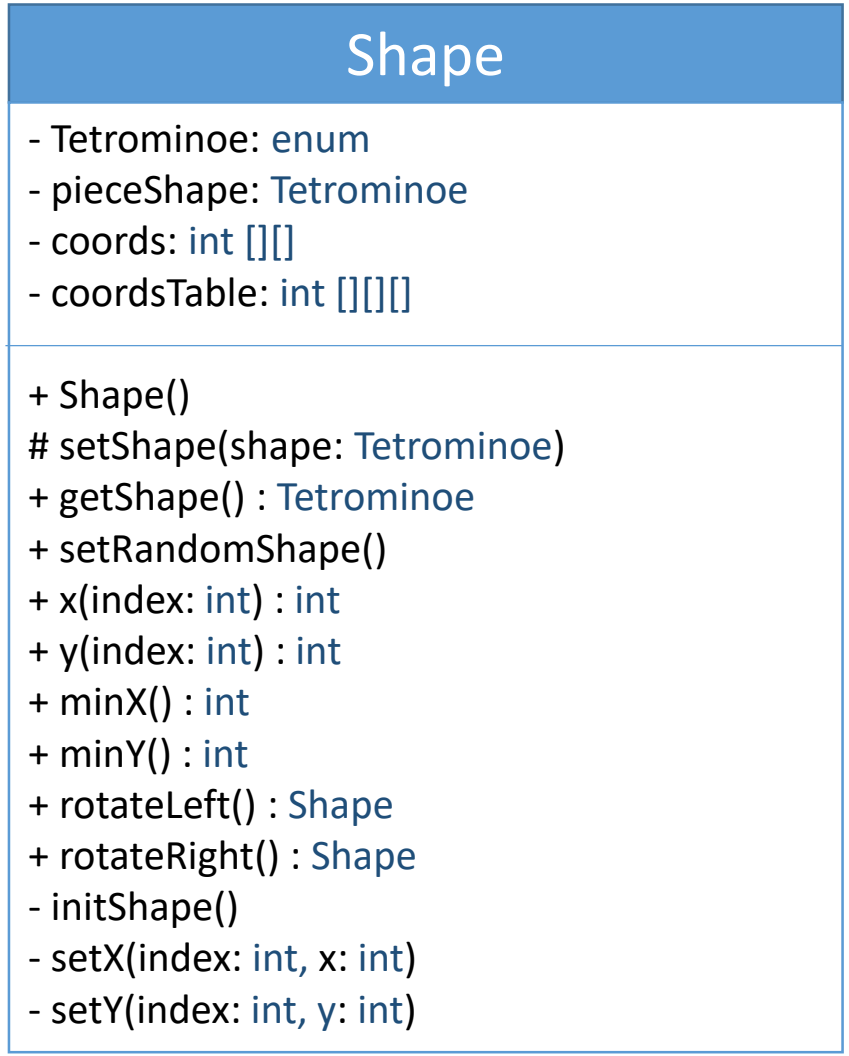


Tetrominoe

```
protected enum Tetrominoe { NoShape, ZShape, SShape, LineShape,
    TShape, SquareShape, LShape, MirroredLShape };
```



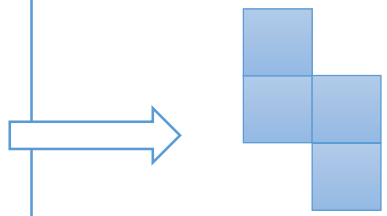
Shape.java

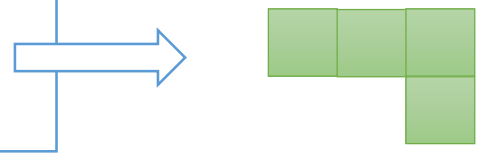


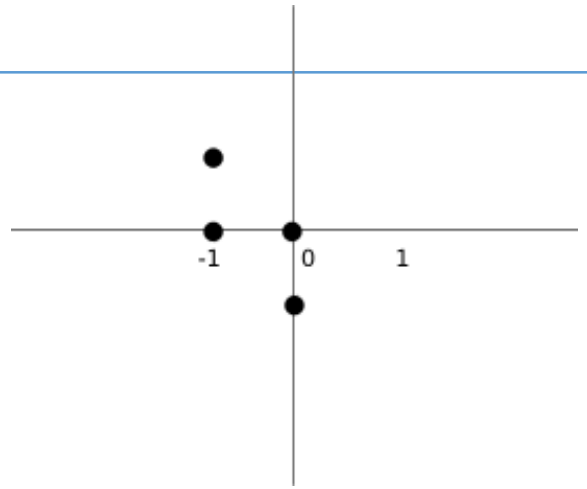
Shape
- Tetrominoe: enum
- pieceShape: Tetrominoe
- coords: int [][]
- coordsTable: int [][][]
+ Shape()
# setShape(shape: Tetrominoe)
+ getShape() : Tetrominoe
+ setRandomShape()
+ x(index: int) : int
+ y(index: int) : int
+ minX() : int
+ minY() : int
+ rotateLeft() : Shape
+ rotateRight() : Shape
- initShape()
- setX(index: int, x: int)
- setY(index: int, y: int)

coordsTable for Tetrominoe

```
coordsTable = new int[][][] {
        { { 0, 0 },   { 0, 0 },   { 0, 0 },   { 0, 0 } },
        { { 0, -1 },  { 0, 0 },   { -1, 0 },  { -1, 1 } },
        { { 0, -1 },  { 0, 0 },   { 1, 0 },   { 1, 1 } },
        { { 0, -1 },  { 0, 0 },   { 0, 1 },   { 0, 2 } },
        { { -1, 0 },  { 0, 0 },   { 1, 0 },   { 0, 1 } },
        { { 0, 0 },   { 1, 0 },   { 0, 1 },   { 1, 1 } },
        { { -1, -1 }, { 0, -1 },  { 0, 0 },   { 0, 1 } },
        { { 1, -1 },  { 0, -1 },  { 0, 0 },   { 0, 1 } }
};
```

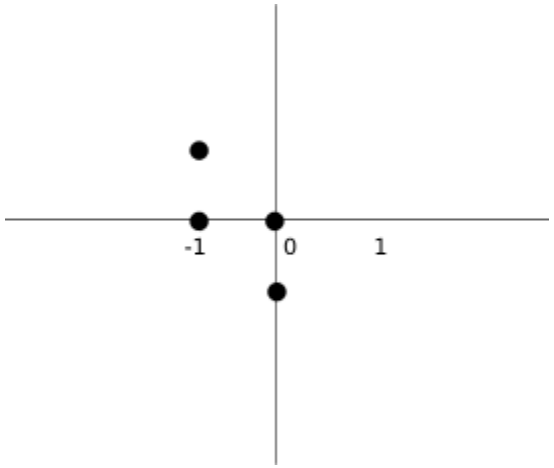






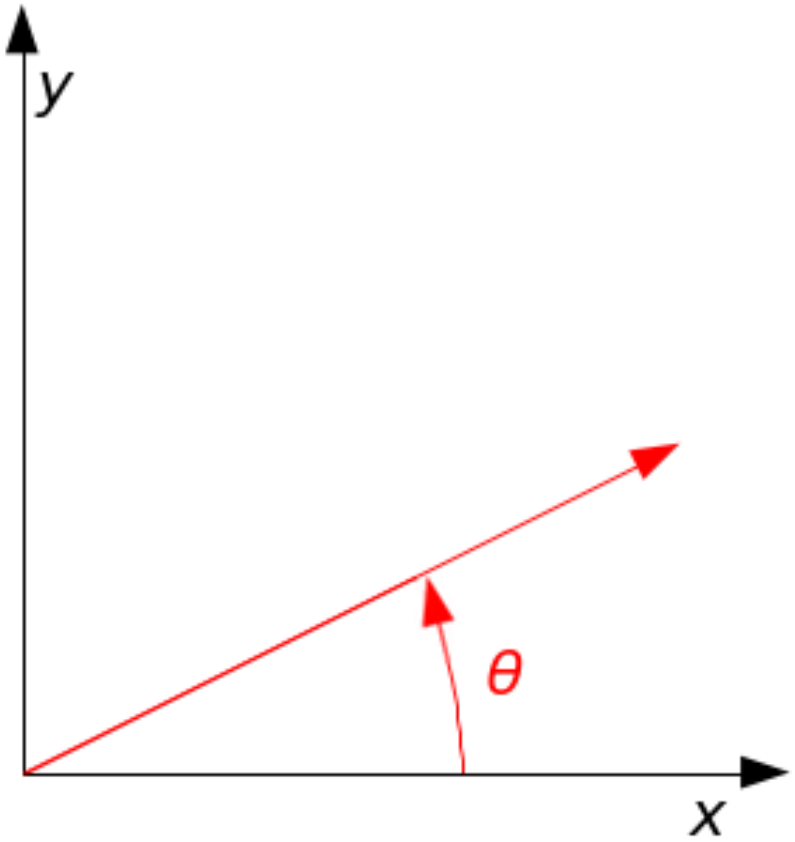
Get Shapes' Coordinates

```
for (int i = 0; i < 4 ; i++) {
    for (int j = 0; j < 2; ++j) {
        coords[i][j] = coordsTable[shape.ordinal()][i][j];
    }
}
```

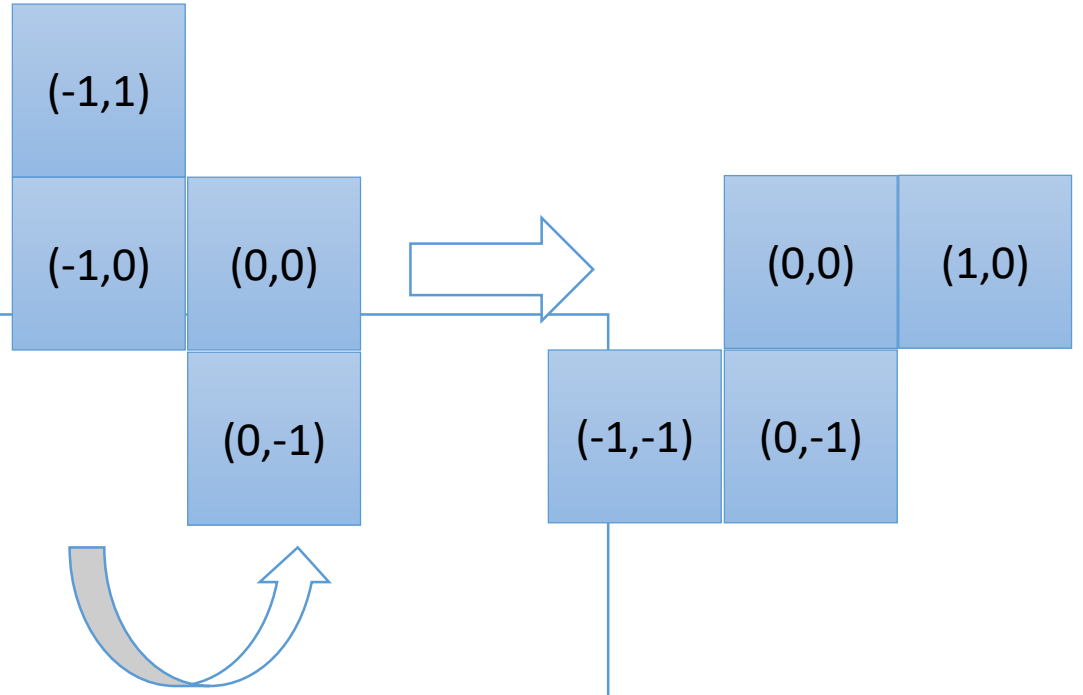


Rotation Matrix

$$\begin{bmatrix} x' \\ y' \end{bmatrix} = \begin{bmatrix} \cos\theta & -\sin\theta \\ \sin\theta & \cos\theta \end{bmatrix} \begin{bmatrix} x \\ y \end{bmatrix}$$



Rotate Right (x'=-y, y'=x)



```
public Shape rotateRight()
{
    if (pieceShape == Tetrominoe.SquareShape)
        return this;
    Shape result = new Shape();
    result.pieceShape = pieceShape;
    for (int i = 0; i < 4; ++i) {
        result.setX(i, -y(i));
        result.setY(i, x(i));
    }
    return result;
}
private void setX(int index, int x) { coords[index][0] = x; }
private void setY(int index, int y) { coords[index][1] = y; }
public int x(int index) { return coords[index][0]; }
public int y(int index) { return coords[index][1]; }
```

Board.java

Board: JPanel

- Timer: timer
- isFallingFinished, isStarted, isPaused : boolean
- numLinesRemoved: int
- curX, curY: int
- curPiece: Shape
- board: Tetrominoe[]

+ Board()
+ paintComponent(g: Graphics)
- squareWidth()
- squareHeight()
- shapeAt(x: int, y: int)
- start()
- pause()
- doDrawing(g: Graphics)
- dropDown()
- oneLineDown()
- clearBoard()
- pieceDropped()
- newPiece()
- removeFullLines()
- doGameCycle()
- update()
- tryMove(newPiece: Shape, newX: int, newY: int): boolean
- drawSquare(g: Graphics, x: int, y: int, shape: Tetrominoe)

Initializing Board

```
private void initBoard(Tetris parent) {

    setFocusable(true);
    timer = new Timer();
    timer.scheduleAtFixedRate(new ScheduleTask(),
            INITIAL_DELAY, PERIOD_INTERVAL);

    curPiece = new Shape();

    statusbar = parent.getStatusBar();
    board = new Tetrominoe[BOARD_WIDTH * BOARD_HEIGHT];
    addKeyListener(new TAdapter());
    clearBoard();
}
```

Updating Game

- Inheriting TimerTask

```
private void doGameCycle() {
    update();
    repaint();
}
private void update() {
    if (isPaused) {
        return;
    }
    if (isFallingFinished) {
        isFallingFinished = false;
        newPiece();
    } else {
        oneLineDown();
    }
}
private class ScheduleTask extends TimerTask {
    @Override
    public void run() {
        doGameCycle();
    }
}
```

Start & Pause

```
public void start() {
    isStarted = true;
    clearBoard();
    newPiece();
}

private void pause() {
    if (!isStarted) {
        return;
    }
    isPaused = !isPaused;
    if (isPaused) {
        statusbar.setText("paused");
    } else {
        statusbar.setText(String.valueOf(numLinesRemoved));
    }
}
```

Two-stage Drawing

```
private void doDrawing(Graphics g) {
    Dimension size = getSize();
    int boardTop = (int) size.getHeight() - BOARD_HEIGHT * squareHeight();
    for (int i = 0; i < BOARD_HEIGHT; ++i) {
        for (int j = 0; j < BOARD_WIDTH; ++j) {
            Tetrominoe shape = shapeAt(j, BOARD_HEIGHT - i - 1);
            if (shape != Tetrominoe.NoShape) {
                drawSquare(g, 0 + j * squareWidth(),
                           boardTop + i * squareHeight(), shape);
            }
        }
    }
    if (curPiece.getShape() != Tetrominoe.NoShape) {
        for (int i = 0; i < 4; ++i) {
            int x = curX + curPiece.x(i);
            int y = curY - curPiece.y(i);
            drawSquare(g, 0 + x * squareWidth(),
                       boardTop + (BOARD_HEIGHT - y - 1) * squareHeight(),
                       curPiece.getShape());
        }
    }
}
```

drawSquare()

```
private void drawSquare(Graphics g, int x, int y, Tetrominoe shape) {
    Color colors[] = {
            new Color(0, 0, 0), new Color(204, 102, 102),
            new Color(102, 204, 102), new Color(102, 102, 204),
            new Color(204, 204, 102), new Color(204, 102, 204),
            new Color(102, 204, 204), new Color(218, 170, 0)
    };

    Color color = colors[shape.ordinal()];
    g.setColor(color);
    g.fillRect(x + 1, y + 1, squareWidth() - 2, squareHeight() - 2);

    g.setColor(color.brighter());
    g.drawLine(x, y + squareHeight() - 1, x, y);
    g.drawLine(x, y, x + squareWidth() - 1, y);

    g.setColor(color.darker());
    g.drawLine(x + 1, y + squareHeight() - 1, x + squareWidth() - 1, y + squareHeight() - 1);
    g.drawLine(x + squareWidth() - 1, y + squareHeight() - 1, x + squareWidth() - 1, y + 1);
}
```

tryMove()

```
private boolean tryMove(Shape newPiece, int newX, int newY) {

    for (int i = 0; i < 4; ++i) {
        int x = newX + newPiece.x(i);
        int y = newY - newPiece.y(i);

        if (x < 0 || x >= BOARD_WIDTH || y < 0 || y >= BOARD_HEIGHT) {
            return false;
        }
        if (shapeAt(x, y) != Tetrominoe.NoShape) {
            return false;
        }
    }

    curPiece = newPiece;
    curX = newX;
    curY = newY;

    repaint();
    return true;
}
```

```
private class TAdapter extends KeyAdapter {
    @Override
    public void keyPressed(KeyEvent e) {
        System.out.println("key pressed");
        if (!isStarted || curPiece.getShape() == Tetrominoe.NoShape) {
            return;
        }
        int keycode = e.getKeyCode();
        if (keycode == KeyEvent.VK_P) {
            pause();
            return;
        }
        if (isPaused) {
            return;
        }
        switch (keycode) {
            case KeyEvent.VK_LEFT: tryMove(curPiece, curX - 1, curY); break;
            case KeyEvent.VK_RIGHT: tryMove(curPiece, curX + 1, curY); break;
            case KeyEvent.VK_DOWN: tryMove(curPiece.rotateRight(), curX, curY); break;
            case KeyEvent.VK_UP: tryMove(curPiece.rotateLeft(), curX, curY); break;
            case KeyEvent.VK_SPACE: dropDown(); break;
            case KeyEvent.VK_D: oneLineDown(); break;
        }
    }
}
```

Dropping Tetrominoe

```
private void dropDown() {
    int newY = curY;
    while (newY > 0) {
        if (!tryMove(curPiece, curX, newY - 1)) {
            break;
        }
        --newY;
    }
    pieceDropped();
}

private void oneLineDown() {
    if (!tryMove(curPiece, curX, curY - 1)) {
        pieceDropped();
    }
}
```

pieceDropped()

```
private void pieceDropped() {

    for (int i = 0; i < 4; ++i) {

        int x = curX + curPiece.x(i);
        int y = curY - curPiece.y(i);
        board[(y * BOARD_WIDTH) + x] = curPiece.getShape();
    }

    removeFullLines();

    if (!isFallingFinished) {
        newPiece();
    }
}
```

newPiece()

```
private void newPiece() {

    curPiece.setRandomShape();
    curX = BOARD_WIDTH / 2 + 1;
    curY = BOARD_HEIGHT - 1 + curPiece.minY();

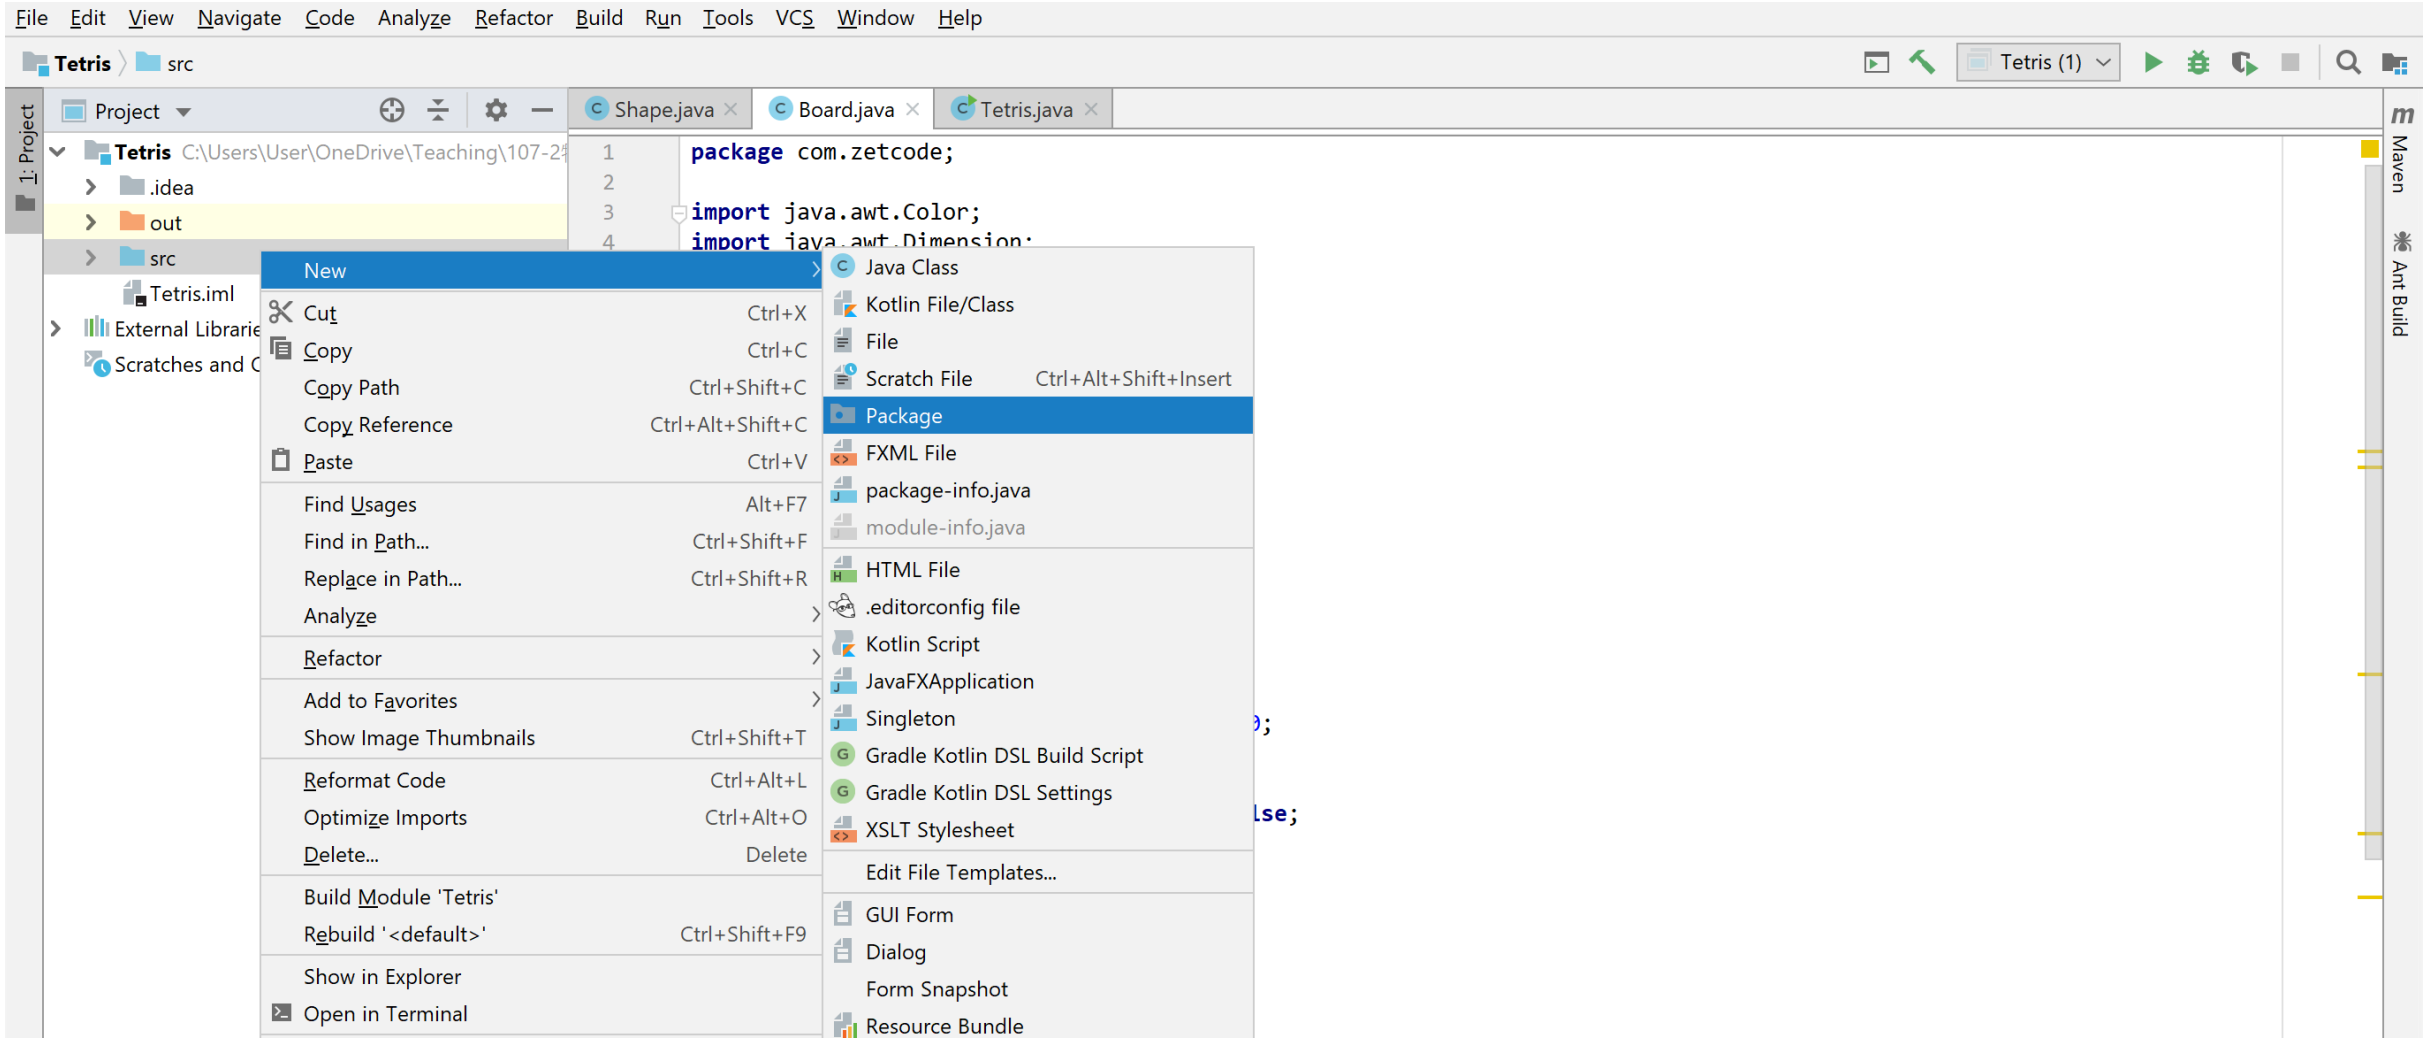
    if (!tryMove(curPiece, curX, curY)) {

        curPiece.setShape(Tetrominoe.NoShape);
        timer.cancel();
        isStarted = false;
        statusbar.setText("Game over");
    }
}
```

Building Tetris using IntelliJ

- Create a project “Tetris”
- Add a package “com.zetcode”
- Add three files in the package:
  - “Shape.java”, “Board.java”, “Tetris.java”

Add Package (com.zetcode)



Tetris [C:\Users\User\OneDrive\Teaching\107-2物件導向程式設計\homework\hw3\Tetris] - ...\src\com\zetcode\Shape.java [Tetris] - IntelliJ IDEA

File Edit View Navigate Code Analyze Refactor Build Run Tools VCS Window Help

Tetris > src > com > zetcode

Tetris (1)

Project

Tetris C:\Users\User\OneDrive\Teaching\107-2

- .idea
- out
- src
  - com.zetcode
    - Board
    - Shape
    - Tetris
  - Tetris.iml
- External Libraries
- Scratches and Consoles

Shape.java | Board.java | Tetris.java

```
1  package com.zetcode;
2
3  import java.util.Random;
4
5  public class Shape {
6
7      protected enum Tetrominoe { NoShape, ZShape, SShape, LineShape,
8          TShape, SquareShape, LShape, MirroredLShape };
9
10     private Tetrominoe pieceShape;
11     private int coords[][];
12     private int[][][] coordsTable;
13
14     public Shape() {
15         initShape();
16     }
17
18     private void initShape() {
19         coords = new int[4][2];
20         setShape(Tetrominoe.NoShape);
21     }
22
23     protected void setShape(Tetrominoe shape) {...}
42
43     private void setX(int index, int x) { coords[index][0] = x; }
44     private void setY(int index, int y) { coords[index][1] = y; }
45     public int x(int index) { return coords[index][0]; }
46     public int y(int index) { return coords[index][1]; }
47     public Tetrominoe getShape()  { return pieceShape; }
48
49     public void setRandomShape() {
50         Random r = new Random();
51         int x = Math.abs(r.nextInt()) % 7 + 1;
52         Tetrominoe[] values = Tetrominoe.values();
53         setShape(values[x]);
54     }
55
56     public int minX() {
57         int m = coords[0][0];
```

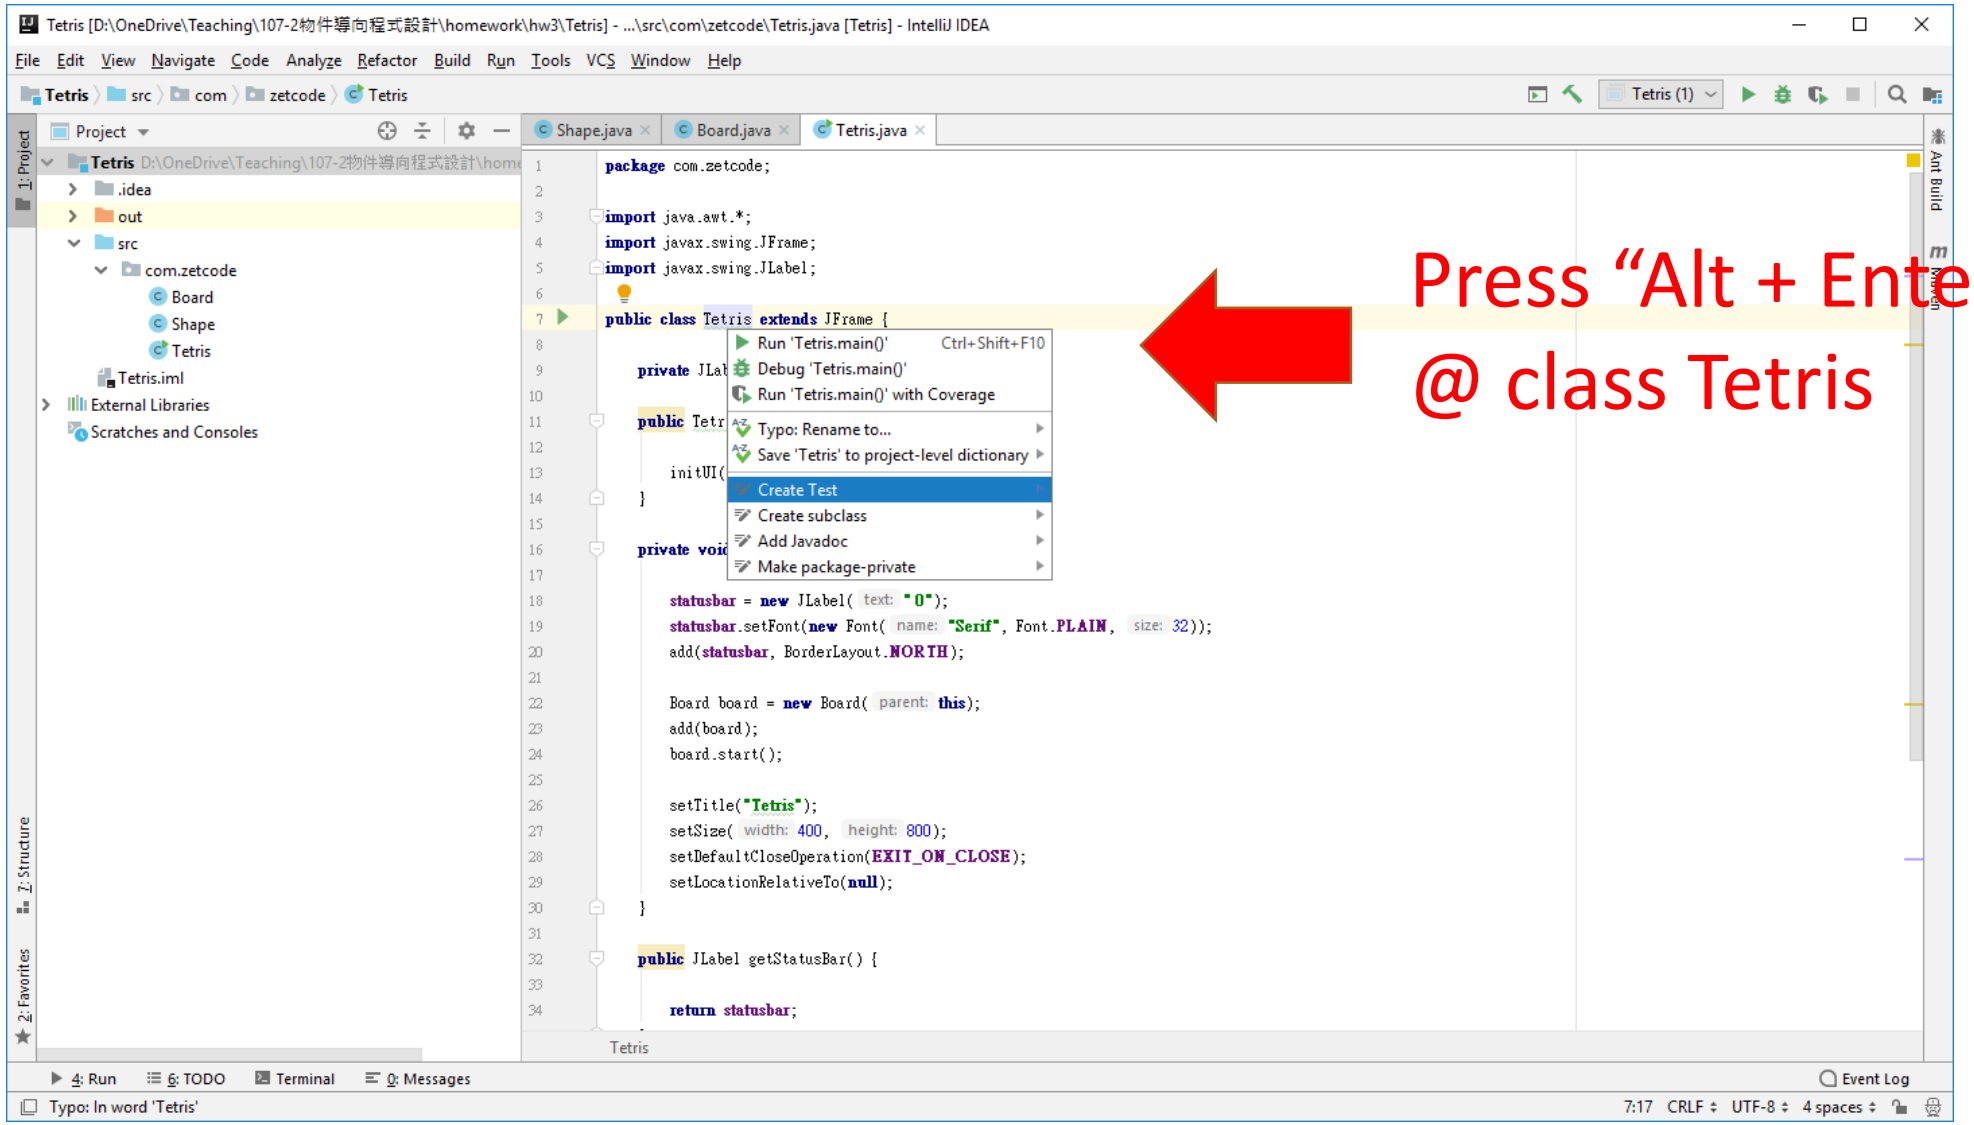
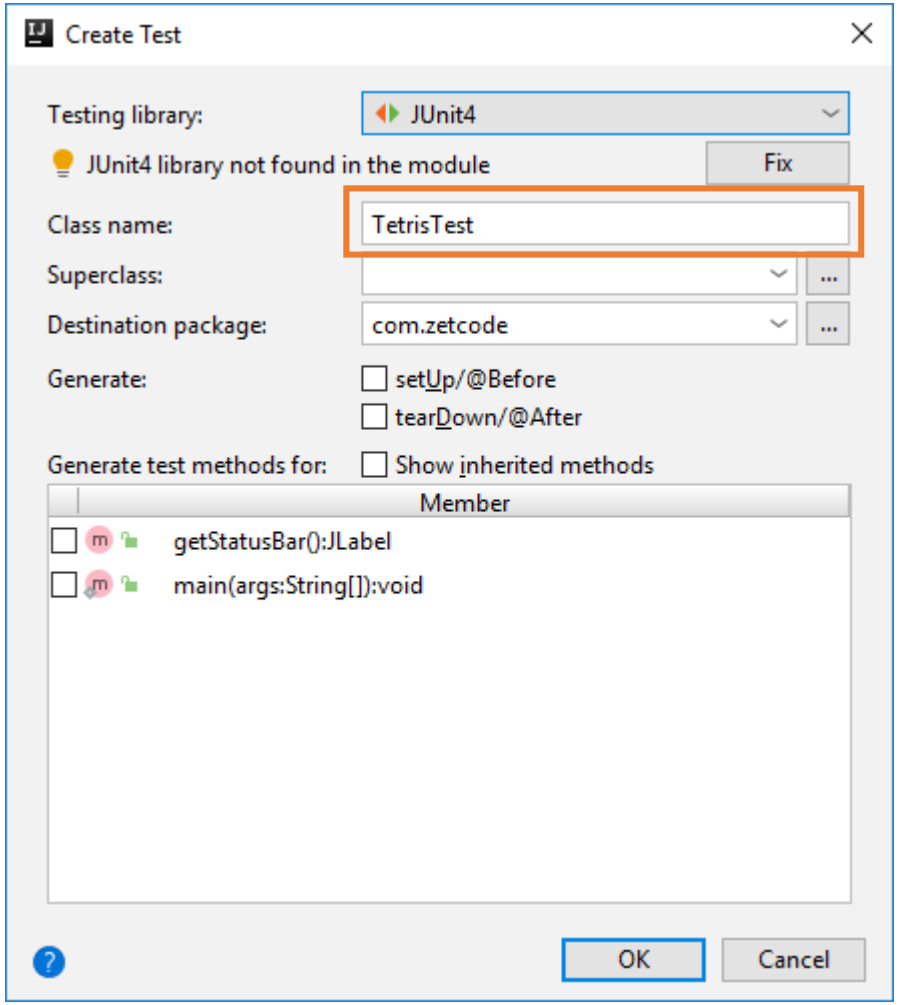
Create Unit Test

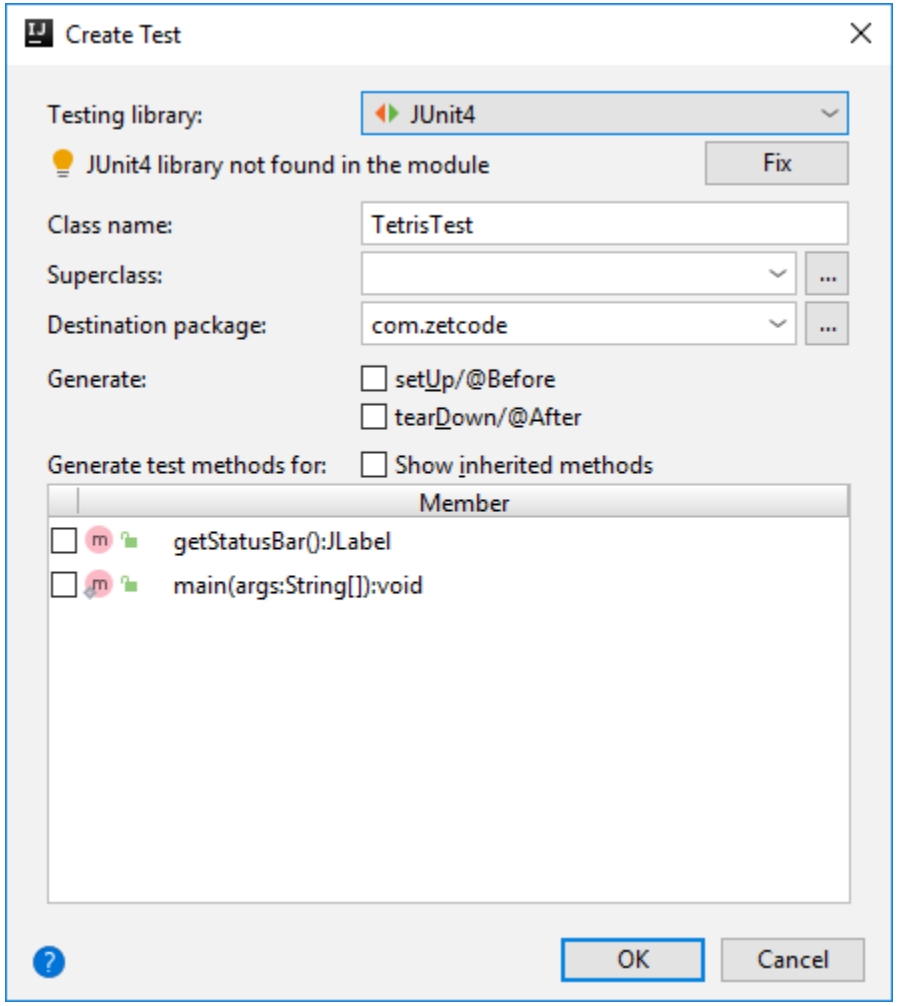


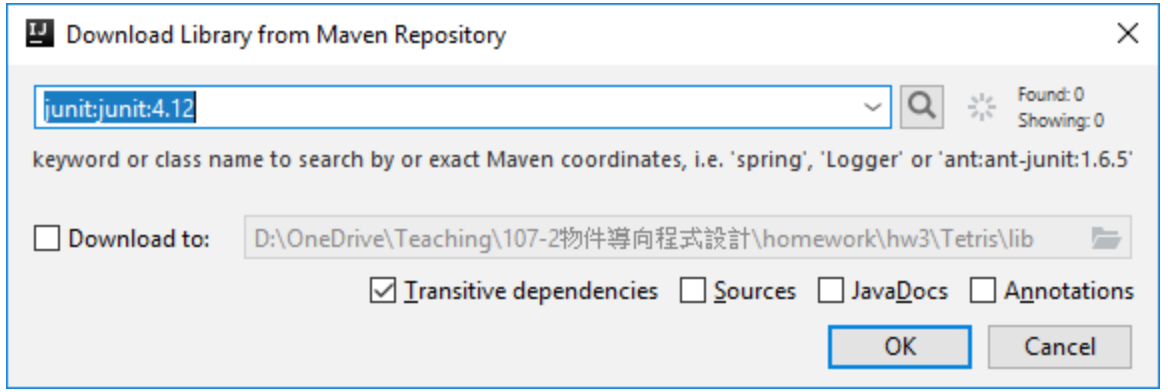
Select JUnit4



Create class TetrisTest

Fixing JUnit Dependency





Adding Test Cases

1. testGameOver()

2. testRandomMove()

```java
package com.zetcode;
import org.junit.*;
import static org.junit.Assert.*;
import org.junit.runner.JUnitCore;
import org.junit.runner.Result;
import org.junit.runner.notification.Failure;
import java.awt.event.WindowEvent;

public class TetrisTest {
    static private Tetris tetris;

    @BeforeClass
    public static void beforeTest() {
        tetris = new Tetris();
        tetris.setVisible(true);
    }
    @Test
    public void testRandomMove() {…}
    @Test
    public void testGameOver() {…}

    public static void main(String[] args) {
        Result result = JUnitCore.runClasses(TetrisTest.class);
        for (Failure failure : result.getFailures()) {
            System.out.println(failure.toString());
        }
        System.out.println(result.wasSuccessful());
        // Closing the window after the final result is printed
        tetris.dispatchEvent(new WindowEvent(tetris, WindowEvent.WINDOW_CLOSING));
    }
}
```

Testing Game-over

```
@Test
public void testGameOver() {
    for (int i=0; i<10; i++)
        tetris.dropDown();
    boolean ret = tetris.isGameOver();
    assertTrue(ret);
    try {
        Thread.sleep(1000);
    } catch (InterruptedException e) {
    }
}
```

Testing Random Move

```
public void testRandomMove() {
    tetris.restart();
    // Random move
    int t = 0;
    try {
        while (t < 100) {
            if (Math.random() > 0.5)
                tetris.move(1);
            else
                tetris.move(-1);
            try {
                Thread.sleep(100);
            } catch (InterruptedException e) {
            }
            if (Math.random() > 0.5)
                tetris.rotate(false);
            else
                tetris.rotate(true);
            t++;
        }
    } catch (Exception e) {
        fail();
    }
}
```

Adding Test API in Tetris.java

```
public class Tetris extends JFrame {
    private JLabel statusbar;
    private Board board;
    public Tetris() { initUI(); }
    private void initUI() {…}

    public JLabel getStatusBar() {  return statusbar; }
    public void dropDown() { board.dropDown(); }
    public boolean isGameOver() { return (statusbar.getText() == "Game over"); }
    public int getLinesRemoved() { return board.getLinesRemoved(); }
    public void restart() {
        board.start();
        statusbar.setText("");
    }
    public boolean move(int x_val) {
        return board.tryMove(board.getCurPiece(), board.curX  + x_val, board.curY);
    }
    public boolean rotate(boolean clockwise) {
        Shape piece;
        if (clockwise)
            piece = board.getCurPiece().rotateLeft();
        else
            piece = board.getCurPiece().rotateRight();
        return board.tryMove(piece, board.curX, board.curY);
    }
    public static void main(String[] args) {
        EventQueue.invokeLater(() -> {
            Tetris game = new Tetris();
            game.setVisible(true); });
    }
}
```

Adding API in Board.java

- Making the following variables and functions public
  - `public int curX = 0;`
  - `public int curY = 0;`
  - `public boolean tryMove(Shape newPiece, int newX, int newY) {…}`
  - `public Shape getCurPiece() { return curPiece;}`
  - `public void dropDown() {…}`

Initialing Timer in start()

```
public void start() {
    isStarted = true;
    clearBoard();
    newPiece();
    numLinesRemoved = 0;
    timer = new Timer();
    timer.scheduleAtFixedRate(
            new ScheduleTask(),
            INITIAL_DELAY, PERIOD_INTERVAL
    );
}
```

Running Test

- Right click on main() of TetrisTest.java
